

Election Systems & Software

MAINTAINING VOTER CONFIDENCE. ENHANCING THE VOTING EXPERIENCE.

PRODUCT OVERVIEW

iVotronic LS™

The **iVotronic LS** provides a digital full-face touch screen voting solution for those jurisdictions that require a larger screen in order to view the ballot in its entirety.

ES&S' iVotronic® line of products provides a secure, accurate, and reliable voting solution that has been proven in thousands of elections worldwide. Like the ES&S iVotronic, the **iVotronic LS** puts state-of-the-art election technology at the voter's fingertips — no printed ballot overlays required. And like the ES&S iVotronic, **iVotronic LS'** Audio Ballot feature and zoom capability easily supports visually impaired voters.

Easy to Use

The **iVotronic LS** is easy to use for poll workers and voters alike. For voters, the **iVotronic LS** provides complete privacy and absolute security. The machine alerts voters to possible under- and overvotes, and the LS has a review screen to ensure that voter intent is captured before casting a ballot. Selections and reselections are easily made on the **iVotronic LS'** easy-to-read screen with only the touch of a finger. And the LS' help button and user-friendly instructions ensure that every voter has the information he or she needs to cast an electronic ballot using the device.

For pollworkers, the **iVotronic LS** allows one-step poll opening, voter activation and poll-closing. The **iVotronic LS** is easy to assemble — one person can set up the unit. With over 35 years of electronic voting experience, ES&S offers the most intuitive pollworker panel interface in the industry.
